

HOSTEL

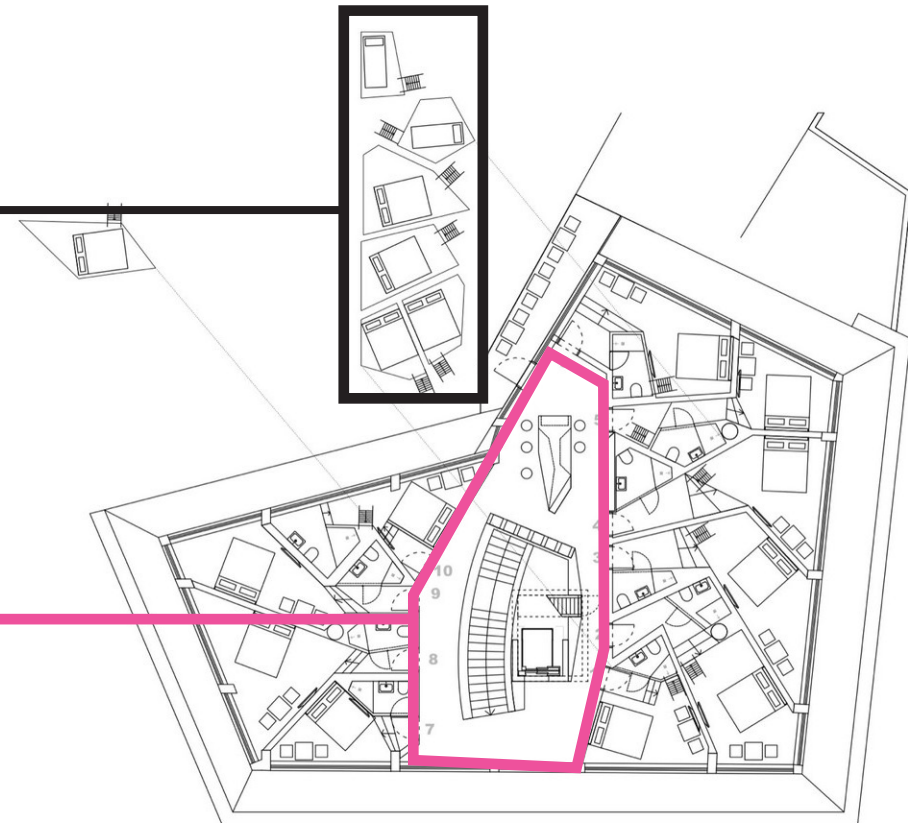

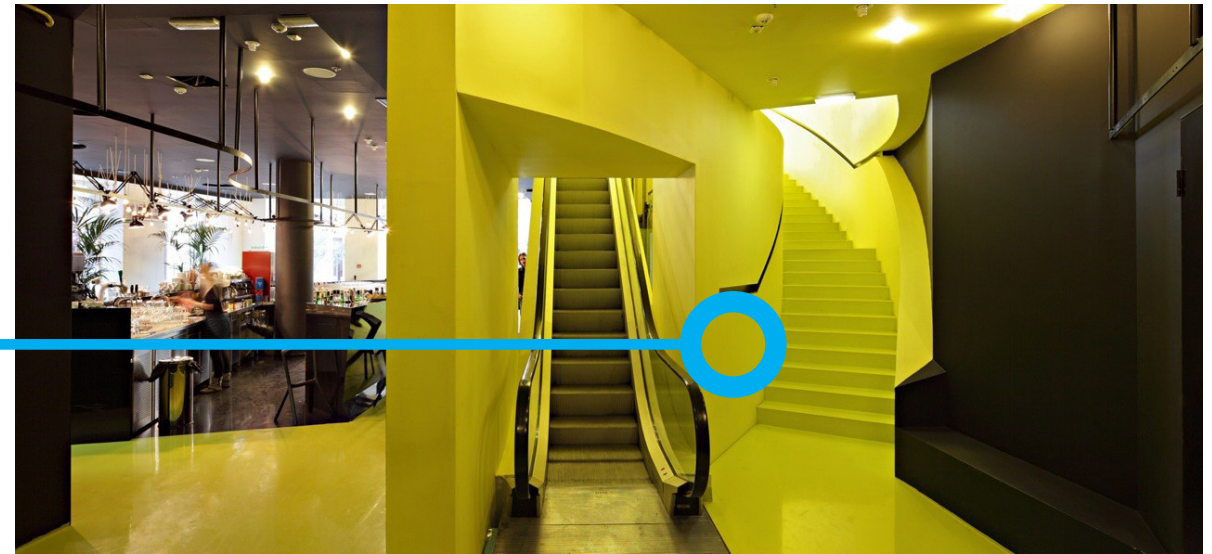

CONCEPT MODELS & COLLAGES

Concept models were not directly used for the project, they were used in understanding feeling and contexts of site along with spatial understanding.

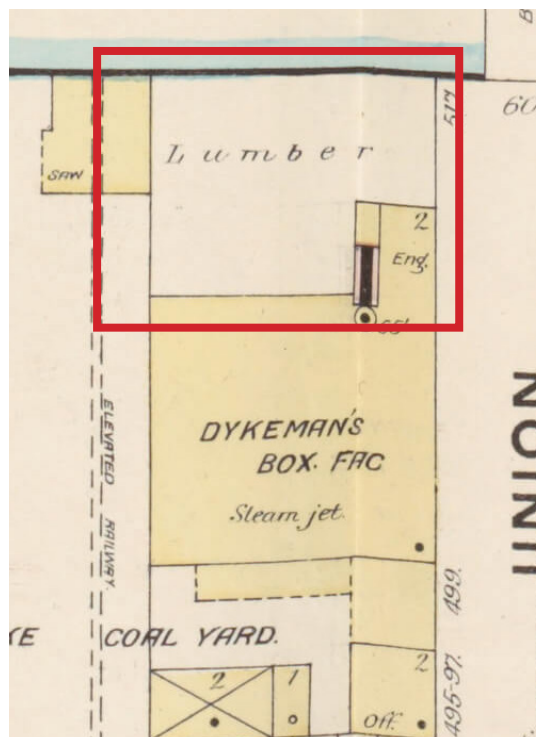

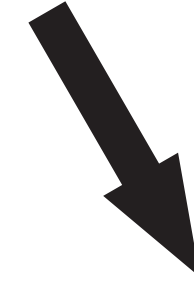

PRECEDENT STUDY

Hostel Gosi Bosi was an inspiration to use historical context to develop a parti. Inspired by the historic sulfur baths of Split, Croatia they dissected a sulfur crystal to form plans and color pallets.

PARTI DEVELOPMENT

The parti was inspired by the site's original use. Owned by the national boxing factory, they produced shipping boxes such as crates. Today we ship using pallets, which in our region are made from Southern Yellow as the national boxing factory would have used. Utilizing the grains from SYP, are expressed throughout structure.

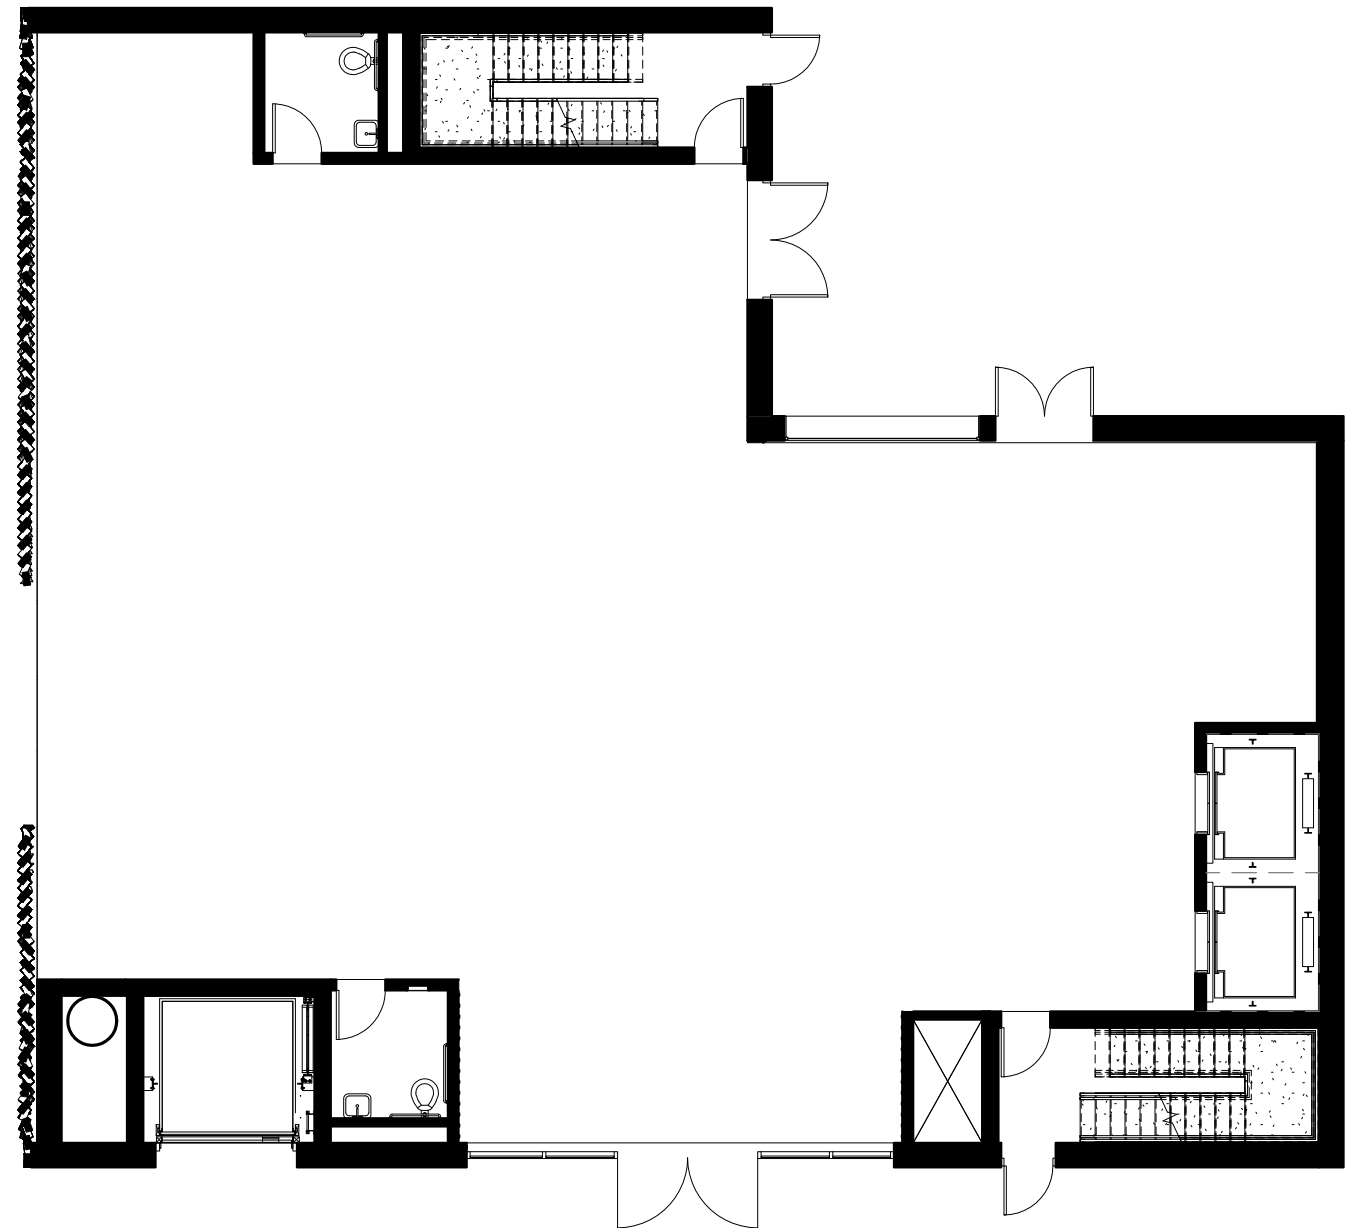

SITE STRATEGY

CORE PLACEMENT

After analyzing site analysis, careful care to placing cores was done. The south elevation only has street access; therefore, freight and one egress stair were placed on that side. The east elevation does not have any exciting views, so passenger elevators were placed there. Lastly regarding best views are on the north elevation an egress stair was placed for safety and clearing room for access to outdoor

FLOOD PREVENTION

Our site is prone to flooding. The canal walkway is too narrow to implement berms to reduce flooding impact. Instead utilizing a flood barrier will allow to keep property safe. If the 100-year flood happens, the cellar level will be flooded. Therefore, storage programs were placed on that level to reduce damage cost. Only costly damage will happen to the bar.
